

CATBBAS VI (Sept. 29 to Oct.1, 2023)

MIA - Mini Invasive Aesthetics

SEPTEMBER 28, 2023

CATBBAS VI Mini Invasive Aesthetics (MIA) by Ali Ghanem

Scope and purpose

A pre-symposium course will be held on Thursday 28th of September. It is organized by our partner Prof. Ali Ghanem. A full day of lecturing, live demonstration and expert panel discussion over the last developments in non-invasive procedures for face and body contouring, mini-invasive surgical procedures using needling/injection/and suspension sutures and regenerative medicine for skin rejuvenation.

Professor Ali Ghanem is a multi-award-winning Consultant Aesthetic and Plastic Surgeon, who offers a complete range of facial procedures and body contouring treatments, including his exclusive Total Facial Refresh.

He founded and led the world's first university programme in aesthetic medicine at Queen Mary University of London and is currently the Director of the Facial Aesthetic Programme at The College of Medicine and Dentistry, Ulster University, UK.

In this edition of non-surgical aesthetics workshop, Professor Ghanem and his colleagues Dr. George Christopoulos, Dr Adriano Santorelli, Dr Sam Van Eeden and Dr. Kim Eunsol will take the delegates through a step by step approach to facial aesthetics from total face and neck botulinum toxins treatment, full facial soft tissue augmentation with fillers and collagen stimulating agents and full resurfacing with chemical peels to the state of the art tool box of energy based devices and aesthetic regenerative treatments such as NDYag, Erbium Yag, CO2, Subdermal laser, polynucleotides, recombinant growth factors, threads, platelet rich aggregates and nanofat. The workshop would include lectures, step by step video tutorials as well as live demonstrations.

The highlight of the workshop would be the participation of Dr Patrick Tonnard and Alex Verpale two of the world's most innovative plastic surgeons, with important contribution on nanofat and its aesthetic indications, and he will deliver one of his very popular facial rejuvenation master classes.

Whether you are a beginner or an advanced aesthetic practitioner, this workshop would provide you with invaluable insights and empower you to greatly enhance your portfolio of aesthetic interventions.

Faculty

Ali Ghanem
Aesthetic Plastic Surgeon

Patrick Tonnard
Aesthetic Plastic Surgeon

George Christopoulos
Aesthetic Plastic Surgeon

Sam van Eeden
Hair transplant Surgeon

Adriano Santorelli
Aesthetic Plastic Surgeon

Alex Verpale
Aesthetic Plastic Surgeon

The symposium is under the organization of Prof. Dr. Moustapha Hamdi together with MediMeet and Brussels University Hospital's team. Join us in the Dolce La Hulpe Hotel just a few miles away from Brussels. For more info: www.medimeet.be/catbbas-vi

CATBBAS VI (Sept. 29 to Oct.1, 2023)

MIA – Mini Invasive Aesthetics

SEPTEMBER 28, 2023

Programme

Session I – Molecular MIAs

09:00 – 10:30

How we can use Recombinant growth factors, polynucleotides and collagen stimulating agents such as poly peptides, poly-caprolactone and poly-L lactic acid for skin rejuvenation and volume restoration towards total facial optimisation

Live demonstration I

Session II - Blood and Dermal Derived Regenerative Factors

11:00 – 11:30

Platelet Rich Plasma vs Platelet rich fibrin in aesthetic medicine – What I would choose and how I use it?
How to combine platelet rich aggregate with HA fillers for soft tissue augmentation
How to combine platelet rich aggregate with energy based devices

Step by step video demonstration I

Session III – Master class in botulinum toxins and fillers

11:30 – 13:00

Botulinum toxin for total facial optimisation using robotic assisted injector
Addressing the volume loss and discoloration of the tear trough
Less is more; A total facial approach to soft tissue augmentation with modern fillers.

Live demonstration II

Session IV - Tissue derived Regenerative Factors

14:00 – 15:30

Dermal micrograft for hair loss, tissue regeneration and skin rejuvenation
Nano fat applications in facial aesthetics

Step by step video demonstration II

Session V – Master class in modern barbed threads

16:00 – 17:00

Total facial soft tissue augmentation and thread suspension
Combining threads and soft tissue augmentation with fillers

Step by step video demonstration III

Session VI - Technology in Regenerative Medicine

17:00 – 17:45

Evolution of CO2 laser resurfacing for skin regeneration
Combination of internal and external laser energy for dermal regeneration
Combination of Erbium Yag and Nd Yag laser for optimal skin resurfacing; the Reverse Protocol.

Live demonstration III

Discussion

17:45 – 18:00
